Education

University Of Wisconsin - Madison

May 2026

Bachelor of Computer Science, Minor in Entrepreneurship

Coursework: Artificial Intelligence, Machine Org & Programming, Applied Statistics, Computer Engineering

Involvement: Education Chair - Code to Connect, Indian Student Association, Google Developer Group, Data Science Club, Madison Coders

Technical Skills

- **Languages:** Python, Java, C, C++, C#, JavaScript, SQL (PostgreSQL), HTML/CSS
- **Frameworks & Libraries:** React Native, ReactJS, Flask, .NET, Pygame
- **Developer Tools & Cloud:** Git, AWS, Railway, Hangfire, Jira
- **Core Competencies:** LLMs, Prompt Engineering, NLP, Real-Time Systems, REST APIs, System Architecture, ETL Pipelines, RAG, Machine Learning

Professional Experience

Homey

Chicago, IL

Founder/CEO

January 2026 – Present

- Enabled real-time listing discovery across 250+ universities by building a React Native, Flask, and PostgreSQL mobile app with a normalized, queryable listings schema.
- Sustained 99% geocoding accuracy across 300+ listings via an async ETL engine with JWT-authed REST APIs and multi-layer validation.
- Prioritized expansion into 15 high-demand campuses by ranking 500 markets on real-time demand metrics.

Polaris Inc.

Minneapolis, MN

Software Engineering Intern, WMS Team

June 2025 – August 2025

- Eliminated manual SQL for 30+ operations staff by building an AI-powered NL analytics tool with .NET REST APIs and PostgreSQL.
- Reduced AI query failures by 40% by developing validation workflows for LLM-generated SQL against enterprise datasets.
- Slashed data access time from hours to under 1 minute by connecting LLM output to live datasets via secure execution pipelines.

Polaris Inc.

Minneapolis, MN

Software Engineering Intern, Ecom Shop Team

May 2024 – August 2024

- Improved backend reliability by refactoring C# email validation logic to eliminate edge-case failures.
- Increased unit test coverage from by 45% by writing comprehensive tests for core C# server components.
- Expanded platform accessibility to 1000+ of global customers by executing frontend localization updates supporting multilingual parts and accessories information.
- Improved UX conversion by running A/B tests that identified higher-performing user flows.
- Eliminated error log noise by 60% by building custom debugging utilities for the backend team.

Technical Projects

Qualcomm – Capstone Project

- Developed an AI public-speaking coaching app for Snapdragon PCs delivering real-time feedback by running concurrent pose, gaze, and facial-landmark inference on-device.
- Reduced inference latency across diverse hardware by engineering modular, quantized video pipelines with QAIRT, ONNX Runtime, and LiteRT.
- Architected a backend-agnostic inference layer auto-selecting QAIRT, ONNX Runtime, or LiteRT per device.
